
AVMATS Engine Support expands Sundstrand APU support with acquisition of Gulfstream Appleton APU Facility assets

October 15, 2020

AVMATS Engine Support has purchased the assets of the Gulfstream Aerospace APU facility located in Appleton, Wisconsin. Since 1993, **AVMATS** has been performing maintenance, repair and overhaul to Sundstrand and Honeywell APUs, including the APU components, in support of the business aviation community.

Justin Giessman, President of **AVMATS**, stated "This acquisition adds capacity and capability to the already robust support that **AVMATS** offers to our customers". The APU shop has expanded by approximately 10,000 square feet and added an additional test cell at our Engine Support facility located in O'Fallon, Missouri.

In addition to the Sundstrand T-62T-40 series APU services and support offered by **AVMATS** Engine Support, we will now support the T-20G series APUs and LRUs. Further, we have added the capabilities to service the Electronic Sequence Units (ESU) and will be providing repair and exchange options for our customers.

Owners, operators, and maintainers should contact **AVMATS** Engine Support directly or their **AVMATS** sales person for all Sundstrand APU support needs. For a list of exchange APUs or to see our capabilities, please visit our website at: avmats.com/engines/

For 24/7 support call AVMATS at 636-532-2674 or email us at apuhelp@avmats.com
